Functional Requirements

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall allow developers to log time against specific project tasks and prevent timesheet submissions exceeding 24 hours in a single calendar day.	High	Pass: Valid timesheet submitted for manager approval; Fail: Timesheet logging 30 hours in one day accepted.	Ensures accurate and realistic time tracking.
FR-002	Functional	The system shall allow developers to submit completed timesheets to the Engineering Manager for approval.	High	Pass : A completed timesheet is successfully submitted and becomes available to the manager. Fail : The timesheet cannot be submitted or is not visible to the manager.	Enables the timesheet approval workflow.
FR-003	Functional	The system shall allow Engineering Managers to approve or reject submitted timesheets	High	Pass: Manager selects approve or reject and the timesheet status changes accordingly. Fail: The status does not change after the manager's action.	Provides managerial control over recorded working hours.
FR-004	Functional	The system shall calculate and display the budget burn rate for each project based on recorded developer hours.	Medium	Pass:The project dashboard displays the calculated budget burn rate using the recorded hours. Fail: The displayed burn rate is missing or incorrect.	Allows managers to monitor project spending and resource usage.
FR-005	Functional	The system shall allow Engineering Managers to view the approval status of submitted developer timesheets.	Medium	Pass: Manager can view whether a timesheet is pending, approved, or rejected. Fail: The correct approval status is not displayed	Helps managers track the progress of timesheet approvals.

Non-Functional Requirements

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
NFR-001	Non-Functional	Timesheet approval status transitions and project budget burn charts must update across dashboards within 500 ms.	High	Pass: Benchmarking tests confirm dashboard updates occur within 500 ms under simulated peak load. Fail: Updates take longer than 500 ms.	Ensures responsive dashboards and timely project monitoring.
NFR-002	Non-Functional	The system shall restrict timesheet approval functions to authenticated Engineering Managers.	High	Pass: Only authenticated Engineering Managers can approve or reject timesheets. Fail: An unauthorised user can access or perform approval actions.	Prevents unauthorised changes to timesheet approval records.
